Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Project Engagement

During the 16th of November 2022, **Royal Lottery** team engaged Solidproof.io to audit the smart contracts that they created. The engagement was technical in nature and focused on identifying the security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

v1.0

<https://testnet.bscscan.com/address/0xBa6B177E14E72D4F8cD392A8947bF3A7BD5a0573#code>

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

| Level | Value | Vulnerability | Risk (Required Action) |
|----------------------|---------|---|---|
| Critical | 9 - 10 | A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken. | Immediate action to reduce risk level. |
| High | 7 – 8.9 | A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way. | Implementation of corrective actions as soon as possible. |
| Medium | 4 – 6.9 | A vulnerability that could affect the desired outcome of executing the contract in a specific scenario. | Implementation of corrective actions in a certain period. |
| Low | 2 – 3.9 | A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective. | Implementation of certain corrective actions or accepting the risk. |
| Informational | 0 – 1.9 | A vulnerability that have informational character but is not effecting any of the code. | An observation that does not determine a level of risk |

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analyzing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

| Dependency / Import Path | Count |
|--|-------|
| @openzeppelin/contracts/access/Ownable.sol | 1 |

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

| File Name | SHA-1 Hash |
|------------------------------|--|
| contracts/lottery.sol | 58457edb43faed990d07d1659f03931f76a8f904 |
| contracts/RefferalSystem.sol | 4d1fe3cd9e0ab9b9c2d3e2174b2793ca2ef90580 |

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Correct implementation of Token standard
3. Deployer cannot mint any new tokens
4. Deployer cannot burn or lock user funds
5. Deployer cannot pause the contract
6. Deployer can set fees
7. Deployer can blacklist/antisnipe address
8. Overall checkup (Smart Contract Security)

Is contract an upgradeable

| Name | |
|-----------------------------|----|
| Is contract an upgradeable? | No |

Correct implementation of Token standard

| ERC20 | | | | |
|--------------|---|-------|--------|----------|
| Function | Description | Exist | Tested | Verified |
| totalSupply | Provides information about the total token supply | | | |
| balanceOf | Provides account balance of the owner's account | | | |
| transfer | Executes transfers of a specified number of tokens to a specified address | | | |
| transferFrom | Executes transfers of a specified number of tokens from a specified address | | | |
| approve | Allow a spender to withdraw a set number of tokens from a specified account | | | |
| allowance | Returns a set number of tokens from a spender to the owner | | | |

Write functions of contracts

v1.0

1. accountRegistration

2. buyTickets

3. changeEndTimeLottery

4. changeInfluencer

5. changeJackPotAddress

6. changeTeamAddress

7. changeTicketPrice

8. endLottery

9. increaseChance

10. receiveWithdraw

11. renounceOwnership

12. setJackPot

13. setLottery

14. transferOwnership

15. withdraw

16. withdrawRefferalsIncome

Deployer cannot mint any new tokens

| Name | Exist | Tested | Status |
|----------------------|-------|--------|--------|
| Deployer cannot mint | | | |
| Max / Total Supply | N/A | | |

Deployer cannot burn or lock user funds

| Name | Exist | Tested | Status |
|----------------------|-------|--------|--------|
| Deployer can lock | | | |
| Deployer cannot burn | | | |

Deployer cannot pause the contract

| Name | Exist | Tested | Status |
|-----------------------|-------|--------|--------|
| Deployer cannot pause | | | |

Deployer can set fees

| Name | Exist | Tested | Status |
|---|-------|--------|--------|
| Deployer cannot set fees over 25% | | | |
| Deployer cannot set fees to nearly 100% or more | | | |

Deployer cannot blacklist/antisnipe addresses

| Name | Exist | Tested | Status |
|--|-------|--------|--------|
| Deployer can blacklist/antisnipe addresses | | | |

Overall checkup (Smart Contract Security)

| Tested | Verified |
|--------|----------|
| | |

Legend

| Attribute | Symbol |
|--------------------------|--------|
| Verified / Checked | |
| Partly Verified | |
| Unverified / Not checked | |
| Not available | |

Modifiers and public functions

v1.0

| | |
|----------------------|--------------------------|
| accountRegistration | withdrawRefferralsIncome |
| buyTickets 🏆 | changeInfluencer |
| increaseChance | |
| setLottery | |
| Ⓜ onlyOwner | |
| endLottery | |
| Ⓜ onlyOwner | |
| withdraw | |
| setJackPot 🏆 | |
| changeTicketPrice | |
| Ⓜ onlyOwner | |
| changeTeamAddress | |
| Ⓜ onlyOwner | |
| changeJackPotAddress | |
| Ⓜ onlyOwner | |
| changeEndTimeLottery | |
| Ⓜ onlyOwner | |
| receiveWithdraw | |
| Ⓜ onlyOwner | |

Ownership Privileges:

- Start and End the lottery at any given time
- Change ticket price to any arbitrary value without any limitations
- Change team address, jackpot address, influencer address
- Change the end time of lottery to any value, including the times 4-5 seconds ahead as long as that particular lottery is running

Source Units in Scope

v1.0

| File | Logic Contracts | Interfaces | Lines | nLines | nSLOC | Comment Lines | Complex. Score |
|------------------------------|-----------------|------------|-------|--------|-------|---------------|----------------|
| contracts/lottery.sol | 1 | ———— | 234 | 234 | 189 | 1 | 136 |
| contracts/ReferralSystem.sol | 1 | ———— | 104 | 104 | 86 | 10 | 48 |
| Totals | 2 | ———— | 338 | 338 | 275 | 11 | 184 |

Legend

| Attribute | Description |
|------------------|---|
| Lines | total lines of the source unit |
| nLines | normalized lines of the source unit (e.g. normalizes functions spanning multiple lines) |
| nSLOC | normalized source lines of code (only source-code lines; no comments, no blank lines) |
| Comment Lines | lines containing single or block comments |
| Complexity Score | a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...) |

Audit Results

AUDIT PASSED

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

| Issue | File | Type | Line | Description |
|-------|--------------------|---------------------------------|--------------|---|
| #1 | Lotterey.sol | Missing zero address validation | 211,215 | We recommend to check that the passed address is not zero |
| #2 | Lotterey.sol | Missing Events | All | Emit events for critical parameter changes. There are no events in the contract |
| #3 | RefferalSystem.sol | Missing Events | All | Emit events for critical parameter changes. There are no events in the contract |
| #4 | All | Floating Pragma | - | The current pragma Solidity directive is " <code>^0.8.7</code> ". Contracts should be deployed with the same compiler version and flags that they have been tested thoroughly. Locking the pragma helps to ensure that contracts do not accidentally get deployed using other versions. |
| #5 | Lotterey.sol | Comparison to Boolean constants | 57,59,66,201 | We recommend not to compare values to Boolean constants inside conditional statements |

Informational issues

| Issue | File | Type | Line | Description |
|-------|------|-------------------------------|------|---|
| #1 | Main | NatSpec documentation missing | — | If you started to comment your code, also comment all other functions, variables etc. |

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

18. November, 2022:

- There is still an owner (Owner still has not renounced ownership)
- We recommend using external sources for randomization. For Example, Chainlink VRF
- Read the whole report and modifiers section for more information.

SWC Attacks

| ID | Title | Relationships | Status |
|--------------------------|---|--|--------|
| SWC-1136 | Unencrypted Private Data On-Chain | CWE-767: Access to Critical Private Variable via Public Method | PASSED |
| SWC-1135 | Code With No Effects | CWE-1164: Irrelevant Code | PASSED |
| SWC-1134 | Message call with hardcoded gas amount | CWE-655: Improper Initialization | PASSED |
| SWC-1133 | Hash Collisions With Multiple Variable Length Arguments | CWE-294: Authentication Bypass by Capture-replay | PASSED |
| SWC-1132 | Unexpected Ether balance | CWE-667: Improper Locking | PASSED |
| SWC-1131 | Presence of unused variables | CWE-1164: Irrelevant Code | PASSED |

| | | | |
|---------|---|--|--------|
| 131 | | | |
| SWC-130 | Right-To-Left-Override control character (U+202E) | CWE-451: User Interface (UI) Misrepresentation of Critical Information | PASSED |
| SWC-129 | Typographical Error | CWE-480: Use of Incorrect Operator | PASSED |
| SWC-128 | DoS With Block Gas Limit | CWE-400: Uncontrolled Resource Consumption | PASSED |
| SWC-127 | Arbitrary Jump with Function Type Variable | CWE-695: Use of Low-Level Functionality | PASSED |
| SWC-125 | Incorrect Inheritance Order | CWE-696: Incorrect Behavior Order | PASSED |
| SWC-121 | Write to Arbitrary | CWE-123: Write-what-where Condition | PASSED |

| | | | |
|---|---|---|--------|
| <u>1</u> <u>2</u> <u>4</u> | Storage Location | | |
| <u>S</u> <u>W</u> <u>C</u> : <u>1</u> <u>2</u> <u>3</u> | Requirement Violation | CWE-573: Improper Following of Specification by Caller | PASSED |
| <u>S</u> <u>W</u> <u>C</u> : <u>1</u> <u>2</u> <u>2</u> | Lack of Proper Signature Verification | CWE-345: Insufficient Verification of Data Authenticity | PASSED |
| <u>S</u> <u>W</u> <u>C</u> : <u>1</u> <u>2</u> <u>1</u> | Missing Protection against Signature Replay Attacks | CWE-347: Improper Verification of Cryptographic Signature | PASSED |
| <u>S</u> <u>W</u> <u>C</u> : <u>1</u> <u>2</u> <u>0</u> | Weak Sources of Randomness from Chain Attributes | CWE-330: Use of Insufficiently Random Values | PASSED |
| <u>S</u> <u>W</u> <u>C</u> : <u>1</u> <u>1</u> <u>1</u> <u>9</u> | Shadowing State Variables | CWE-710: Improper Adherence to Coding Standards | PASSED |
