# Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

DPA Token (DPAT) is a DeFi Real Estate protocol representing funding and ownership in underlying real-world land, property and infrastructure projects in major African cities

## Project Engagement

During the Date of 30th of January 2023, **DPA Token Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
@openzeppelin/contracts/token/ERC20/ERC20.sol  
@openzeppelin/contracts/token/ERC20/IERC20.sol  
@openzeppelin/contracts/token/ERC20/utils/SafeERC20.sol  
@openzeppelin/contracts/access/Ownable.sol  
@openzeppelin/contracts/utils/math/SafeMath.sol  
@openzeppelin/contracts/utils/math/SafeCast.sol  
@uniswap/v2-periphery/contracts/interfaces/IUniswapV2Router02.sol  
@uniswap/v2-core/contracts/interfaces/IUniswapV2Factory.sol  
@uniswap/v2-core/contracts/interfaces/IUniswapV2Pair.sol
```

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

### Components

 Contracts	 Libraries	 Interfaces	 Abstract
2	4	6	2

#### Exposed Functions

This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.

 Public	 Payable
71	5

External	Internal	Private	Pure	View
51	174	5	84	29

#### StateVariables

Total	 Public
35	18

#### Capabilities

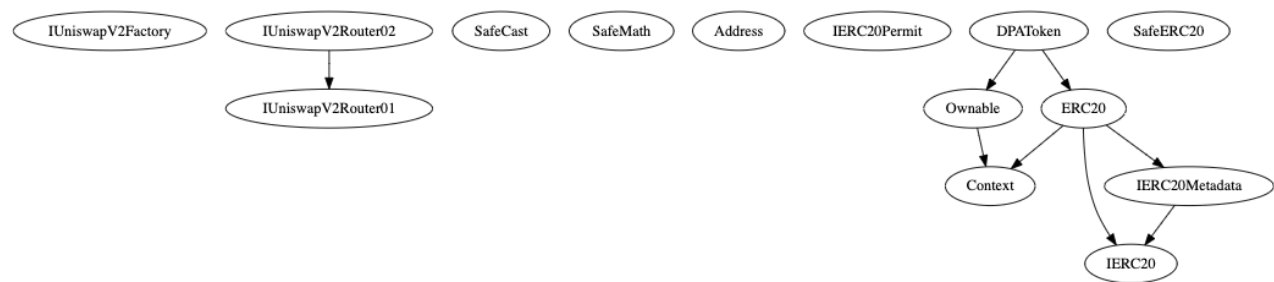

Solidity Versions observed	 Experimental Features	 Can Receive Funds	 Uses Assembly	 Has Destroyable Contracts
 0.8.17		 yes	 yes (1 asm blocks)	

 Transfers ETH	 Low-Level Calls	 DelegateCall	 Uses Hash Functions	 ECRrecover	 New/Create/Create2
 yes		 yes			

 TryCatch	 Unchecked
	 yes

# Inheritance Graph

## v1.0

CallGraph  
v1.0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Correct implementation of Token standard
3. Deployer cannot mint any new tokens
4. Deployer cannot burn or lock user funds
5. Deployer cannot pause the contract
6. Deployer cannot set fees
7. Deployer cannot blacklist/antisnipe addresses
8. Overall checkup (Smart Contract Security)

## Is contract an upgradeable

Name	
Is contract an upgradeable?	No

## Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

## Write functions of contract v1.0

- ◆ `setMarketingAddress`
- ◆ `setTreasuryAddress`
- ◆ `setSwapAndLiquifyEnabled`
- ◆ `changeNumTokensSellToAddToLiquidity`
- ◆ `excludeFromFee`
- ◆ `includeInFee`
- ◆ `changeMaxTxLimit`
- ◆ `setSellFee`
- ◆ `setBuyFee`
- ◆ `withdrawStuckETH`
- ◆ `removeStuckToken`

## Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✓
Max / Total Supply	1000.000.000		

Comments:

**v1.0**

- Owner cannot mint new tokens

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	✓	✓	✓

Comments:

**v1.0**

- Owner can lock user funds by
  - Setting max tx amount to 0

## Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

## Deployer cannot set fees

Name	Exist	Tested	Status
Deployer can set fees over 25%	✓	✓	✓
Deployer cannot set fees to nearly 100% or to 100%	✓	✓	✓

Comments:

### v1.0

- Fees cannot be set without any limitations. Although, the combined buy and sell fees per transaction can be set up to 26%
- Moreover, this scenario will take effect in the transactions where none of the wallets transferring funds are excluded from the fees.

## Deployer can blacklist/antisnipe addresses

Name	Exist	Tested	Status
Deployer cannot blacklist/antisnipe addresses	—	—	—

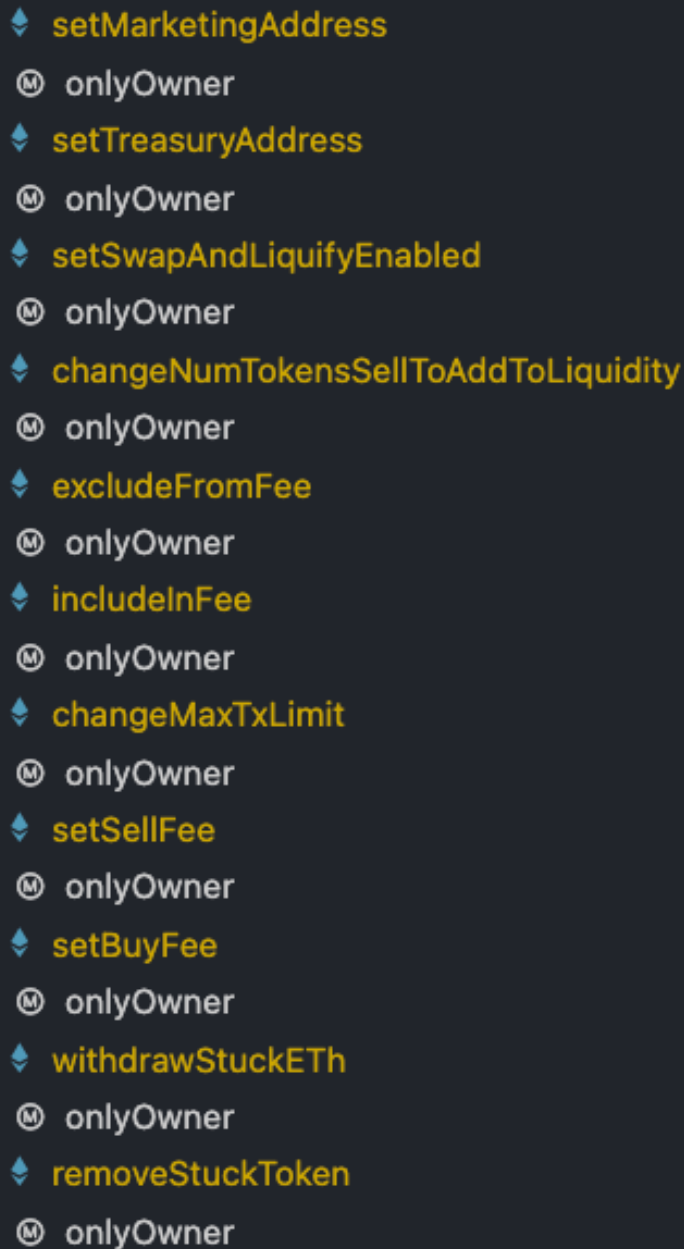

## Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

### Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗
Not available	—

## Modifiers and public functions v1.0

A screenshot of a list of public functions and their modifiers on a dark background. The functions are listed in yellow text, and the modifiers are listed in white text. The functions are: `setMarketingAddress`, `setTreasuryAddress`, `setSwapAndLiquifyEnabled`, `changeNumTokensSellToAddToLiquidity`, `excludeFromFee`, `includeInFee`, `changeMaxTxLimit`, `setSellFee`, `setBuyFee`, `withdrawStuckETH`, and `removeStuckToken`. Each function is followed by its modifier, `onlyOwner`, which is preceded by a small circle with an 'M' inside.

- ◆ `setMarketingAddress`  
Ⓜ `onlyOwner`
- ◆ `setTreasuryAddress`  
Ⓜ `onlyOwner`
- ◆ `setSwapAndLiquifyEnabled`  
Ⓜ `onlyOwner`
- ◆ `changeNumTokensSellToAddToLiquidity`  
Ⓜ `onlyOwner`
- ◆ `excludeFromFee`  
Ⓜ `onlyOwner`
- ◆ `includeInFee`  
Ⓜ `onlyOwner`
- ◆ `changeMaxTxLimit`  
Ⓜ `onlyOwner`
- ◆ `setSellFee`  
Ⓜ `onlyOwner`
- ◆ `setBuyFee`  
Ⓜ `onlyOwner`
- ◆ `withdrawStuckETH`  
Ⓜ `onlyOwner`
- ◆ `removeStuckToken`  
Ⓜ `onlyOwner`

### Ownership Privileges:

- Set marketing and treasury address
- Enable/Disable swap and liquify
- Change the number of tokens sell to add liquidity to any arbitrary number including zero.
- Include/Exclude wallets in fees
- Withdraw tokens from the contract but not the native ones but it is possible to take out the contract's balance.

**Please check if an `OnlyOwner` or similar restrictive modifier has been forgotten.**

# Source Units in Scope

## v1.0

File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score
contracts/dpatoken.sol	1	————	305	301	223	20	212
<b>Totals</b>	<b>1</b>	————	<b>305</b>	<b>301</b>	<b>223</b>	<b>20</b>	<b>212</b>

### Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalised lines of the source unit (e.g. normalises functions spanning multiple lines)
nSLOC	normalised source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

## Critical issues

**No critical issues**

## High issues

**No high issues**

## Medium issues

**No medium issues**

## Low issues

Issue	File	Type	Line	Description
#1	Main	Missing Zero Address Validation (missing-zero-check)	2279, 2283, 2296, 2300	Check that the address is not zero
#2	Main	Local variables shadowing	2209, 2262	Rename the local variables that shadow another component
#3	Main	Missing Events Arithmetic	2279-2307, 2393	Emit an event for critical parameter changes

## Informational issues

Issue	File	Type	Line	Description
#1	Main	NatSpec documentation missing	—	If you started to comment your code, also comment all other functions, variables etc.

## Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/latest/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

## 7. February 2023:

- There is still an owner (Owner still has not renounced ownership)
- Read whole report and modifiers section for more information

## SWC Attacks

ID	Title	Relationships	Status
