## Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

TBA

## Project Engagement

During the 30th of May 2022, **BOM Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Dependency / Import Path	Count
@openzeppelin/contracts/access/Ownable.sol	2
@openzeppelin/contracts/token/ERC721/extensions/ERC721URIStorage.sol	1
@openzeppelin/contracts/utils/Strings.sol	1
@openzeppelin/contracts/utils/math/SafeMath.sol	2

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

File Name	SHA-1 Hash
contracts/BOMNFT.sol	39d6ae4f455cb2bcb05a610ded26783556b92c7c
contracts/BOMToken.sol	628de59531807d049a15d7f038d8fa4838355581
contracts/IERC20.sol	5cafd4d53f797d5c18267a2c3deb3d5e68f77bc6

## Source Lines v1.0

## Risk Level v1.0

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	5	0	4	1

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

Version	Public	Payable
1.0	79	3

Version	External	Internal	Private	Pure	View
1.0	52	57	0	0	33

### State Variables

Version	Total	Public
1.0	46	41

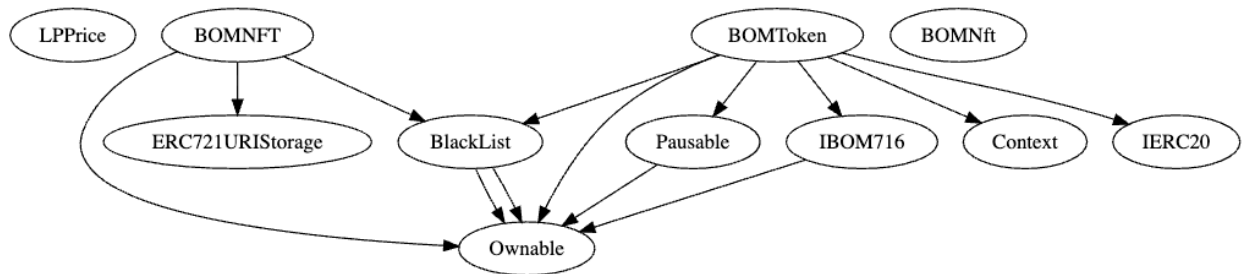

### Capabilities

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	<code>^0.8.1</code> <code>^0.8.7</code>		<code>yes</code>		

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	EC Recover	New/Create/Create2
---------	---------------	-----------------	--------------	---------------------	------------	--------------------

1.0	yes					
-----	-----	--	--	--	--	--

## Inheritance Graph v1.0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

### Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

ERC721				
Function	Description	Exist	Tested	Verified
BalanceOf	Count all NFTs assigned to an owner	✓	✓	✓
OwnerOf	Find the owner of an NFT	✓	✓	✓
SafeTransferFrom	Transfers the ownership of an NFT from one address to another address	✓	✓	✓
SafeTransferFrom	See above - Difference is that this function has an extra data parameter	✓	✓	✓
TransferFrom	Transfer ownership of an NFT	✓	✓	✓
Approve	Change or reaffirm the approved address for an NFT	✓	✓	✓
SetApprovalForAll	Enable or disable approval for a third party ("operator") to manage all of `msg.sender`'s assets	✓	✓	✓
GetApproved	Get the approved address for a single NFT	✓	✓	✓
IsApprovedForAll	Query if an address is an authorized operator for another address	✓	✓	✓
SupportsInterface	Query if a contract implements an interface	✓	✓	✓
Name	Provides information about the name	✓	✓	✓
Symbol	Provides information about the symbol	✓	✓	✓
TokenURI	Provides information about the TokenUri	✓	✓	✓

## Write functions of contract v1.0

1. addBlackList	1. addAllowedSupply
2. approve	2. addBlackList
3. burn	3. approve
4. burnFrom	4. mint
5. changeDistDelay	5. mintNFTs
6. decreaseAllowance	6. pause
7. distRewardToNFTHolders	7. removeBlackList
8. fetchLPPrice	8. renounceOwnership
9. increaseAllowance	9. safeTransferFrom
10. mint	10. safeTransferFrom
11. pause	11. setApprovalForAll
12. removeBlackList	12. setBaseURI
13. renounceOwnership	13. setLPPriceInfo
14. setBornNFTAddress	14. setLPpairaddress
15. setLPPriceInfo	15. setMaxSupply
16. setLPStake	16. setTokenURI
17. setLPpairaddress	17. setUsdCost
18. setMarketingStake	18. setwithdrawAddress
19. setRewardWalletAddress	19. transferFrom
20. transfer	20. transferOwnership
21. transferByNFT	21. withdraw
22. transferFrom	
23. transferFromByNFT	
24. transferInvestorWalletOwnership	
25. transferOwnership	
26. unpaue	
27. withdrawReward	

## Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✗

Comments:

### v1.0

- Anyone can mint new nfts
- Owner can mint new tokens in BOMToken to him-/herself

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	✓	✓	✓

Comments:

### v1.0

- Owner can lock user funds by
  - blacklisting addresses
  - Pause contract
- Tokens
  - can be burned by msg.sender

## Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	✓	✓	✗

Comments:

**v1.0**

- Owner can pause contract

## Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

### Legend

# Modifiers and public functions

## v1.0

**BOMToken Functions:**

- setRewardWalletAddress
  - onlyOwner
- transfer
- transferByNFT
  - whenNotPaused
- distRewardToNFTHolders
  - whenNotPaused
- approve
- transferFrom
- transferFromByNFT
  - whenNotPaused
- withdrawReward
  - whenNotPaused
- setBomNFTAddress
  - onlyOwner
- increaseAllowance
- decreaseAllowance
- burn
- burnFrom
- mint
  - onlyOwner
- transferInvestorWalletOwnership
- setLPpairaddress
  - onlyOwner
- setLPPriceInfo
  - onlyOwner
- fetchLPPrice
- setLPStake
  - onlyOwner
- setMarketingStake
  - onlyOwner

**BOMNFT Functions:**

- changeDistDelay
  - onlyOwner
- transferByNFT
- transferFromByNFT
- distRewardToNFTHolders
- withdrawReward
- calcTxnFee

**BOMNFT Modifiers:**

- addBlackList
  - onlyOwner
- removeBlackList
  - onlyOwner
- pause
  - onlyOwner
  - whenNotPaused
- unpause
  - onlyOwner
  - whenPaused

## Comments

- Deployer can set following state variables without any limitations
  - BOMToken
    - Can only be decreased
      - marketingStake
      - lpStake
  - BOMNFT
    - usdCost
    - maxSupply
    - allowedSupply

- Deployer can enable/disable following state variables
  - BOMNFT
    - paused
    - isBlackListed
- Deployer can set following addresses
  - BOMToken
    - lpinfo
    - lpAddress
    - bomnft
    - lpMasterAddress
    - marketingWallet
    - teamWallet
    - techWallet
  - BOMNFT
    - lpAddress
    - lpinfo
    - baseURI
- Existing Modifiers
  - BOMToken
    - whenNotPaused
    - whenPaused
- Owner can withdraw contract balance to withdrawAddress
  - Withdraw address can be set to any address

**Please check if an OnlyOwner or similar restrictive modifier has been forgotten.**

## Source Units in Scope

### v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/BOMNFT.sol	2	1	219	213	165	12	177	
	contracts/BOMToken.sol	4	2	715	640	376	169	366	—————
	contracts/ERC20.sol	—————	1	81	22	17	57	15	—————
	<b>Totals</b>	<b>6</b>	<b>4</b>	<b>1015</b>	<b>875</b>	<b>558</b>	<b>238</b>	<b>558</b>	

### Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

# AUDIT PASSED

## Critical issues

**No critical issues**

## High issues

Issue	File	Type	Line	Description
#1	BOMNF T	IpAddress must be restricted to owner	99	Everybody can set LP address from the contract with setLPpairaddress function

## Medium issues

**No medium issues**

## Low issues

Issue	File	Type	Line	Description
#1	BOMTo ken	A floating pragma is set	2	The current pragma Solidity directive is „^0.8.7”.
#2	BOMNF T	A floating pragma is set	5	The current pragma Solidity directive is „^0.8.1”.
#3	BOMTo ken	Missing Zero Address Validation (missing-zero-check)	174, 691, 671	Check that the address is not zero
#4	BOMTo ken	Local variables shadowing	651, 380	Rename the local variables that shadow another component
#5	BOMTo ken	Missing Events Arithmetic	709, 711, 121	Emit an event for critical parameter changes

## Informational issues

Issue	File	Type	Line	Description
#1	BOMToken	Functions that are not used	222	Remove unused functions
#2	BOMNFT	Misspelling	See description	<p>Change following words:</p> <ul style="list-style-type: none"> <li>- Auther L13</li> </ul> <p>Make sure to change it everywhere else as well.</p>
#3	BOMNFT	Error message is missing	114, 115, 126, 142, 143, 154, 172, 184, 198, 207, 212	Provide an error message for require statement
#4	BOMToken	Error message is missing	28, 36, 197-200, 273, 289, 290, 314, 422, 448, 449, 655, 656, 673, 678, 683	Provide an error message for require statement
#5	All	NatSpec documentation missing	-	If you started to comment your code, also comment all other functions, variables etc.
#6	BOMToken	Variable should not be 0	184	<p>Prevent state variable to be 0 because you are dividing with it. Otherwise this will cause an error.</p> <p>If this variable is set to 0 the Matic price will also be 0 in L108, BOMNFT</p>
#7	BOMToken	Zero variable	709	If variable is set to 0 it cannot be set upwards again
#8	BOMToken	Visibility order	43, 51	Visibility modifiers like "external, public, etc." come first and after it the others.
#9	BOMToken	Unused event	76	Remove or emit event

#10	BOMNF T	Duplicate code	139, 113	We recommend you to create a function to use the same code because of repetition. Pay attention to the changes while comparing.
-----	------------	----------------	----------	---

## Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

### 31. May 2022:

- LPPrice contract was not provided to solidproof
  - Do your own research here
- Read whole report and modifiers section for more information
