## Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

AtomPad is a diverse multichain De-Fi ecosystem which consists of a launchpad, contract auditing, blockchain gaming, token vesting and liquidity locking services.

AtomPad is the first platform that implemented NFTs into launchpad, investors will be able to purchase limited NFTs which will grant LIFETIME allocations for every project that launches on the platform.

## Project Engagement

During the 25th of February 2023, **AtomPad Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

| Level                | Value   | Vulnerability   | Risk (Required Action)  |
|----------------------|---------|---|---|
| <b>Critical</b>      | 9 - 10  | A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.      | Immediate action to reduce risk level.                              |
| <b>High</b>          | 7 – 8.9 | A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way. | Implementation of corrective actions as soon as possible.           |
| <b>Medium</b>        | 4 – 6.9 | A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.                                     | Implementation of corrective actions in a certain period.           |
| <b>Low</b>           | 2 – 3.9 | A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.       | Implementation of certain corrective actions or accepting the risk. |
| <b>Informational</b> | 0 – 1.9 | A vulnerability that have informational character but is not effecting any of the code.   | An observation that does not determine a level of risk              |

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

| Dependency / Import Path  | Count |
|---|-------|
| @openzeppelin/contracts-upgradeable/access/OwnableUpgradeable.sol               | 1     |
| @openzeppelin/contracts-upgradeable/proxy/utils/Initializable.sol               | 1     |
| @openzeppelin/contracts-upgradeable/security/PausableUpgradeable.sol            | 1     |
| @openzeppelin/contracts-upgradeable/security/ReentrancyGuardUpgradeable.sol     | 1     |
| @openzeppelin/contracts-upgradeable/token/ERC20/utils/SafeERC20Upgradeable.sol  | 1     |
| @openzeppelin/contracts-upgradeable/token/ERC721/IERC721ReceiverUpgradeable.sol | 1     |
| @openzeppelin/contracts-upgradeable/token/ERC721/IERC721Upgradeable.sol         | 1     |

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

| File Name                          | SHA-1 Hash                               |
|------------------------------------|--|
| contracts/interfaces/IAtpadNft.sol | 34ed7d589089665609b93070697b6eedbd4e0b23 |

# Inheritance Graph

## v1.0

# CallGraph

## v1.0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Deployer cannot set fees
6. Deployer cannot blacklist/antisnipe addresses
7. Overall checkup (Smart Contract Security)

## Is contract an upgradeable

| Name                        |     |
|-----------------------------|-----|
| Is contract an upgradeable? | Yes |

Comments:

### v1.0

- Owner can deploy a new version of the contract which can change any limit and give owner new privileges
  - Be aware of this and do your own research for the contract which is the contract pointing to

## Write functions of contract v1.0

1. addTier (0x01353d5a)
2. decreasePromoAllocPoints (0x78f27bea)
3. increasePromoAllocPoints (0x6da91293)
4. initialize (0xc4d66de8)
5. pause (0x8456cb59)
6. renounceOwnership (0x715018a6)
7. resetStakeToken (0x972cb8a7)
8. setDecimals (0x7a1395aa)
9. setDisableOrWithdraw (0x863d8031)
10. setEnableOrDisableStake (0xa0913865)
11. setMaxStakeOrWithdrawNft (0x96a876ce)
12. setMinStakingAmount (0x612d669e)
13. stake (0xa694fc3a)
14. stakeNft (0x28417f4c)
15. transferOwnership (0xf2fde38b)
16. unpause (0x3f4ba83a)
17. withdraw (0x2e1a7d4d)
18. withdrawAll (0x853828b6)
19. withdrawCollectedFee (0xd4d68e12)
20. withdrawNft (0xf544286e)

## Deployer cannot mint any new tokens

| Name                 | Exist | Tested | Status |
|----------------------|-------|--------|--------|
| Deployer cannot mint | —     | —      | —      |

## Deployer cannot burn or lock user funds

| Name                 | Exist | Tested | Status |
|----------------------|-------|--------|--------|
| Deployer cannot lock | ✓     | ✓      | ✗      |
| Deployer cannot burn | -     | -      | -      |

Comments:

### v1.0

- Owner can lock user funds by
  - Setting min staking amount to a high value
  - Setting max stake or withdraw nft value to lowest value as possible
  - Pause the contract

## Deployer cannot pause the contract

| Name                  | Exist | Tested | Status |
|-----------------------|-------|--------|--------|
| Deployer cannot pause | ✓     | ✓      | ✗      |

Comments:

**v1.0**

- Owner can pause contract

## Deployer cannot set fees

| Name   | Exist | Tested | Status |
|--|-------|--------|--------|
| Deployer cannot set fees over 25%                  | —     | —      | —      |
| Deployer cannot set fees to nearly 100% or to 100% | —     | —      | —      |

## Deployer can blacklist/antisnipe addresses

| Name  | Exist | Tested | Status |
|---|-------|--------|--------|
| Deployer cannot blacklist/antisnipe addresses | —     | —      | —      |

## Overall checkup (Smart Contract Security)

| Tested | Verified |
|--------|----------|
| ✓      | ✓        |

### Legend

| Attribute                | Symbol |
|--------------------------|--------|
| Verified / Checked       | ✓      |
| Partly Verified          | ⚠      |
| Unverified / Not checked | ✗      |
| Not available            | —      |

# Modifiers and public functions

v1.0

- initialize
  - initializer
- stake
  - stakeEnabled
  - nonReentrant
  - whenNotPaused
- withdraw
  - withdrawEnabled
  - nonReentrant
  - whenNotPaused
- withdrawAll
  - withdrawEnabled
  - nonReentrant
  - whenNotPaused
- stakeNft
  - stakeEnabled
  - nonReentrant
  - whenNotPaused
- withdrawNft
  - nonReentrant
  - whenNotPaused
  - withdrawEnabled
- withdrawCollectedFee
  - onlyOwner
- resetStakeToken
  - onlyOwner
- addTier
  - onlyOwner
- increasePromoAllocPoints
  - onlyOwner
- decreasePromoAllocPoints
  - onlyOwner
- setEnabledOrDisableStake
  - onlyOwner
- setDisableOrWithdraw
  - onlyOwner
- setDecimals
  - onlyOwner
- setMaxStakeOrWithdrawNft
  - onlyOwner
- setMinStakingAmount
  - onlyOwner
- pause
  - onlyOwner
- unpause
  - onlyOwner

- renounceOwnership
  - onlyOwner
- transferOwnership
  - onlyOwner

Note: Functions from imported libraries were not listed below

## Comments

- Deployer can set following state variables without any limitations
  - minStakingAmount
  - maxStakeOrWithdrawNft
  - decimals
  - promoAllocPoints
- Deployer can enable/disable following state variables
  - \_paused
  - withdrawOn
  - stakeOn
- Deployer can set following addresses
  - stakeToken
- Existing Modifiers
  - stakeEnabled
  - withdrawEnabled
- Decimals value was used to check the minimum staking amount
- On some functions there are withdraw and pause state variables checked at the same time
- Owner can
  - add new tiers
  - Withdraw collected fee
  -

**Please check if an OnlyOwner or similar restrictive modifier has been forgotten.**

| Issue | File        | Type                         | Line                          | Description                                     |
|-------|-------------|------------------------------|-------------------------------|---|
| #1    | Atompa<br>d | Missing Events<br>Arithmetic | 617, 602,<br>632, 637,<br>642 | Emit an event for critical<br>parameter changes |

## Informational issues

**No informational issues**

## Commented Code exist

There are some instances of code being commented out in the following files that should be removed:

| File | Line | Comment |
|------|------|---------|
|------|------|---------|

|         |         |   |
|---------|---------|---|
| Atompad | 546-575 | <pre> ///<notice !="address(0)," !collection");="" !index");="" "!stake");="" "stakepool:="" &gt;="" &lt;="" 0,="" <="" <dev="" <notice="" _collection,="" _stake,="" _tier,="" _tierindex)="" be="" called="" external="" for="" function="" is="" live="" memory="" not="" once="" onlyowner="" pre="" require(_collection="" require(_stake="" require(_tierindex="" requirement="" should="" stakepool="" staking="" this="" tiers.length,="" tiers[_tierindex]="_tier;" tiers[_tierindex].collection="_collection;" tiers[_tierindex].stake="_stake;" to="" uint256="" update="" updatecollection(address="" updatestakingreq(uint256="" updatetier(tier="" warning:="" {="" }=""> </notice></pre> |
|---------|---------|---|

## Recommendation

Remove the commented code, or address them properly.

## Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/latest/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

## 28. February 2023:

- There is still an owner (Owner still has not renounced ownership)
- Owner can deploy a new version of the contract which can change any limit and give owner new privileges
- Read whole report and modifiers section for more information

## SWC Attacks
