Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Project Engagement

During the 4th of October 2022, **Anarchist Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Dependency / Import Path	Count
@openzeppelin/contracts-upgradeable/access/OwnableUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/proxy/utils/Initializable.sol	1
@openzeppelin/contracts-upgradeable/proxy/utils/UUPSUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/security/PausableUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/token/ERC20/ERC20Upgradeable.sol	1
@openzeppelin/contracts-upgradeable/token/ERC20/extensions/ERC20VotesCompUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/token/ERC20/extensions/ERC20VotesUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/token/ERC20/extensions/draft-ERC20PermitUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/utils/math/SafeMathUpgradeable.sol	1

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/IUniswapV2Factory.sol	256aec653e4a62ebe5da34508b6aafd454ee816f
contracts/add.sol	f2f235687a8cd312e58651e6d5362f02e08fa8e5

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Correct implementation of Token standard
3. Deployer cannot mint any new tokens
4. Deployer cannot burn or lock user funds
5. Deployer cannot pause the contract
6. Deployer cannot set fees
7. Deployer cannot blacklist/antisnipe addresses
8. Overall checkup (Smart Contract Security)

Is contract an upgradeable

Name	
Is contract an upgradeable?	Yes

Comments:

v1.0

- Owner can deploy a new version of the contract which can change any limit and give owner new privileges
 - Be aware of this and do your own research for the contract which is the contract pointing to

Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract v1.0

1. approve (0x095ea7b3)
2. decreaseAllowance (0xa457c2d7)
3. delegate (0x5c19a95c)
4. delegateBySig (0xc3cda520)
5. excludeFromMaxWalletToken (0x22b68ac9)
6. increaseAllowance (0x39509351)
7. initialize (0xc4d66de8)
8. migrateETH (0x74da7cd8)
9. permit (0xd505accf)
10. renounceOwnership (0x715018a6)
11. setAddress (0xe30081a0)
12. setAutomatedMarketMakerPair (0x9a7a23d6)
13. setDAOFee (0xc451996e)
14. setMarketingAddress (0x906e9dd0)
15. setMarketingFee (0xa918299c)
16. setMaxWalletAmount (0x27a14fc2)
17. setStakingPoolAddress (0x203d81c1)
18. setStakingPoolFee (0x4687486e)
19. setSwapEnable (0xe40ffe00)
20. setSwapTokensAtAmount (0xa4a4f3b2)
21. setWhitelistAddress (0x3f914aef)
22. transfer (0xa9059cbb)
23. transferFrom (0x23b872dd)
24. transferOwnership (0xf2fde38b)
25. transferTokens (0xa64b6e5f)
26. upgradeTo (0x3659cfe6)
27. upgradeToAndCall (0x4f1ef286)

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✓
Max / Total Supply	1000000000000		

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	✓	✓	✓

Comments:

v1.0

- Owner can lock user funds by
 - Setting max wallet amount to 0
 - Using pause functionality

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	✓	✓	✗

Comments:

v1.0

- Owner can pause contract

Deployer cannot set fees

Name	Exist	Tested	Status
Deployer cannot set fees over 25%	✓	✓	✓
Deployer cannot set fees to nearly 100% or to 100%	✓	✓	✓

Deployer can blacklist/antisnipe addresses

Name	Exist	Tested	Status
Deployer cannot blacklist/antisnipe addresses	—	—	—

Overall checkup (Smart Contract Security)

Modifiers and public functions

v1.0

✓	⚡	initialize	
	Ⓜ	initializer	
✓	⚡	setAddress	
	Ⓜ	onlyOwner	
✓	⚡	setMarketingAddress	
	Ⓜ	onlyOwner	
✓	⚡	setStakingPoolAddress	
	Ⓜ	onlyOwner	
✓	⚡	setWhitelistAddress	
	Ⓜ	onlyOwner	
✓	⚡	setSwapTokensAtAmount	
	Ⓜ	onlyOwner	
✓	⚡	setMaxWalletAmount	
	Ⓜ	onlyOwner	
✓	⚡	setSwapEnable	
	Ⓜ	onlyOwner	
✓	⚡	setDAOFee	
	Ⓜ	onlyOwner	
✓	⚡	setMarketingFee	
	Ⓜ	onlyOwner	
✓	⚡	setStakingPoolFee	
	Ⓜ	onlyOwner	
✓	⚡	excludeFromMaxWalletToken	
	Ⓜ	onlyOwner	
✓	⚡	setAutomatedMarketMakerPair	
	Ⓜ	onlyOwner	
✓	⚡	transferTokens	
	Ⓜ	onlyOwner	
✓	⚡	migrateETH	
	Ⓜ	onlyOwner	

Note: not listed functions was implemented from imported libraries

Comments

- Deployer can set following state variables without any limitations
 - maxWalletAmount
 - Amount must below the total supply
 - swapTokensAtAmount
 - Amount must below the total supply
- Deployer can enable/disable following state variables
 - automatedMarketMakerPairs

- isExcludedFromMaxWalletToken
- swapEnable
- whitelistedAddress
- Deployer can set following addresses
 - staking
 - marketing
 - treasury
- Existing Modifiers
 - onlyOwner
- Owner can
 - transfer address balance to arbitrary addresses with the “migrateETH” function

```
218     function migrateETH(address payable recipient↑) public onlyOwner {
219         recipient↑.transfer(address(this).balance);
220     }
```

- Transfer any token to an arbitrary address with “transferToken” function

```
214     function transferTokens(address tokenAddress↑, address to↑, uint256 amount↑) public onlyOwner {
215         IERC20Upgradeable(tokenAddress↑).transfer(to↑, amount↑);
216     }
```

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/IUniswapV2Factory.sol	—————	3	17	7	5	1	20	
	contracts/add.sol	1	—————	269	269	217	1	224	
	Totals	1	3	286	276	222	2	244	 

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalised lines of the source unit (e.g. normalises functions spanning multiple lines)
nSLOC	normalised source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

Critical issues

No critical issues

High issues

Issue	File	Type	Line	Description
#1	Main	Protect initialize function with a constructor	45	<p>Add contract is an upgradeable contract that does not protect its initiliaze function.</p> <p>For more information: https://docs.openzeppelin.com/contracts/4.x/api/proxy#Initializable-_disableInitializers--</p> <p>We recommend you to add a constructor to ensure `initialize` cannot be called on the logic contract</p> <p>and also the "UUPSUpgradeable_init" function was not called in the "initialize" function</p>
#2	Main	Protect "_authorizeUpgrade" function with a modifier	See description	<p>We recommend you to override the "_authorizedUpgrade" function from the "UUPSUpgradeable.sol" contract to prevent from upgrading by another addresses with a modifier.</p> <p>For more information visit the open zeppelin wizard (https://wizard.openzeppelin.com/) and click on "UUPS" in the upgradeability section on the left side bar. You can see that open zeppelin used it in the same way like you should.</p>

Medium issues

No medium issues

Low issues

Issue	File	Type	Line	Description
#1	Main	Missing Zero Address Validation (missing-zero-check)	218	Check that the address is not zero
#2	Main	Missing Events Arithmetic	145, 140	Emit an event for critical parameter changes

Informational issues

Issue	File	Type	Line	Description
#1	Main	Set whitelist to false	110, 117, 103	We recommend you to exclude the old staking from whitelisting while updating the staking address Same for marketing L110 and treasury L103

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/latest/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

07. October 2022:

- Owner can deploy a new version of the contract which can change any limit and give owner new privileges
- Read whole report and modifiers section for more information

SWC Attacks

ID	Title	Relationships	Status
