Disclaimer

<u>SolidProof.io</u> reports are not, nor should be considered, an "endorsement" or "disapproval" of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any "product" or "asset" created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc'...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof's position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

Speed-Fi is a multi-functional technological application offering a range of decentralized finance (DeFi) services, including but not limited to multi-network DEX, multi-network Launchpad, NFT supermarket, and WEB3 P2E VR Racing game

Project Engagement

During the 8th of June 2022, **SpeedFi Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

| Level | Value | Vulnerability | Risk (Required Action) |
|---------------|---------|---|---|
| Critical | 9 - 10 | A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken. | Immediate action to reduce risk level. |
| High | 7 – 8.9 | A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way. | Implementation of corrective actions as soon aspossible. |
| Medium | 4 – 6.9 | A vulnerability that could affect the desired outcome of executing the contract in a specific scenario. | Implementation of corrective actions in a certain period. |
| Low | 2 – 3.9 | A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective. | Implementation of certain corrective actions or accepting the risk. |
| Informational | 0 – 1.9 | A vulnerability that have informational character but is not effecting any of the code. | An observation that does not determine a level of risk |

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

- 1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
- 2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
- 3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
- 4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

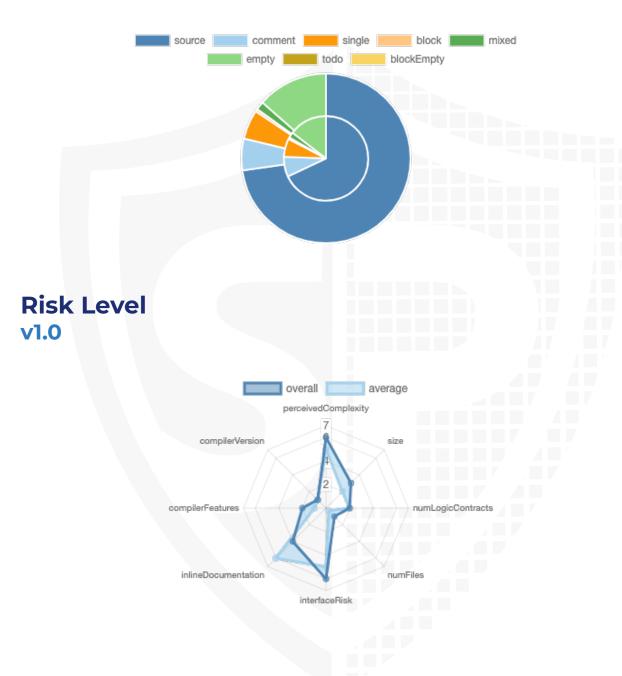

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

| File Name | SHA-1 Hash |
|---------------------------------|--|
| contracts/UniswapV2Router02.sol | 8dd79c15f935559b7b8e7a45bef20751edc1354d |
| contracts/SpeedFi.sol | 282c4003577876ddab3d27127e3c1872fb3d8606 |
| contracts/UniswapV2Factory.sol | 4fb7fff822581b1ba8c0db399be46689d216e1af |

Metrics

Source Lines v1.0

Capabilities

Components

| Version | Contracts | Libraries | Interfaces | Abstract |
|---------|-----------|-----------|------------|----------|
| 1.0 | 6 | 8 | 15 | 1 |

Exposed Functions

This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.

| Version | | Public | Payable |
|---------|--|--------|---------|
| 1.0 | | 245 | 15 |

| Version | External | Internal | Private | Pure | View |
|---------|----------|----------|---------|------|------|
| 1.0 | 200 | 207 | 29 | 52 | 88 |

State Variables

| Version | Total | Public |
|---------|-------|--------|
| 1.0 | 74 | 40 |

Capabilities

| Version | Solidity Versions observed | Experim ental Features | Can Receive Funds | Uses Assembl Y | Has Destroya ble Contract s |
|---------|----------------------------------|------------------------------|-------------------------|--------------------------|---|
| 1.0 | 0.6.12 ^0.8.1 3 | | yes | yes (4 asm blocks) | |

| 1.0 | yes | | | yes | yes | yes → Asse mblyCa ll:Nam e:crea te2 |

Inheritance Graph

v1.0

CallGraph v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

- 1. Correct implementation of Token standard
- 2. Deployer cannot mint any new tokens
- 3. Deployer cannot burn or lock user funds
- 4. Deployer cannot pause the contract
- 5. Overall checkup (Smart Contract Security)

Correct implementation of Token standard

| | ERC20 | | | | | | | |
|--------------|---|--------------|----------|--------------|--|--|--|--|
| Function | Description | Exist | Tested | Verified | | | | |
| TotalSupply | Provides information about the total token supply | √ | ✓ | \checkmark | | | | |
| BalanceOf | Provides account balance of the owner's account | \checkmark | √ | \checkmark | | | | |
| Transfer | Executes transfers of a specified number of tokens to a specified address | √ | √ | ✓ | | | | |
| TransferFrom | Executes transfers of a specified number of tokens from a specified address | √ | √ | √ | | | | |
| Approve | Allow a spender to withdraw a set number of tokens from a specified account | √ | √ | √ | | | | |
| Allowance | Returns a set number of tokens from a spender to the owner | √ | √ | √ | | | | |

Write functions of contract v1.0

| 1. SweepStuck | 1. createPair | 1. addLiquidity |
|-----------------------------------|-------------------|---|
| 2. approve | | 2. addLiquidityETH |
| 3. changeRouterVersion | 2. setFeeTo | 3. removeLiquidity |
| 4. decreaseAllowance | | 4. removeLiquidityETH |
| 5. excludeFromBurn | 3. setFeeToSetter | 5. removeLiquidityETHSupportingFeeOnTransferTokens |
| 6. excludeFromFee | | |
| 7. includelnBurn | 4. setMigrator | 6. removeLiquidityETHWithPermit |
| 8. includeInFee | | $7.\ remove Liquidity ETHWith Permit Supporting Fee On Transfer Tokens$ |
| | | 8. removeLiquidityWithPermit |
| 9. increaseAllowance | | 9. swapETHForExactTokens |
| 10. lock | | |
| 11. manualSwapAndLiquifyTokens | | 10. swapExactETHForTokens |
| 12. removeTxLimit | | 11. swapExactETHForTokensSupportingFeeOnTransferTokens |
| 13. renounceOwnership | | 12. swapExactTokensForETH |
| 14. setAllFees | | 13. swapExactTokensForETHSupportingFeeOnTransferTokens |
| 15. setBuyMaxTxAmount | | 14. swapExactTokensForTokens |
| 16. setDevelopmentAddress | | 15. swapExactTokensForTokensSupportingFeeOnTransferTokens |
| 17. setMarketingAddress | | 16. swapTokensForExactETH |
| 18. setMinTokensToSell | | 17. swapTokensForExactTokens |
| 19. setPairAddress | | |
| 20. setRouterAddress | | |
| 21. setRouterAddressAndCreatePair | | |
| 22. setSellMaxTxAmount | | |
| 23. setSwapAndLiquifyEnabled | | |
| 24. transfer | | |
| 25. transferForeignToken | | |
| 26. transferFrom | | |
| 27. transferOwnership | | |
| 28. unlock | | |

Deployer cannot mint any new tokens

| Name | Exist | Tested | Status |
|----------------------|-------|--------|--------|
| Deployer cannot mint | - | _ | - |
| Max / Total Supply | | 1000 | 000000 |

Deployer cannot burn or lock user funds

| Name | Exist | Tested | Status |
|----------------------|--------------|----------|--------|
| Deployer cannot lock | \checkmark | √ | X |
| Deployer cannot burn | - | _ | - |

Comments:

v1.0

- · Owner can lock user funds by
 - blacklisting addresses
 - Setting buy max tx amount to 0
 - Setting sell max tx amount to 0
- Tokens
 - will be burned while tx

Deployer cannot pause the contract

| Name | Exist | Tested | Status |
|-----------------------|-------|--------|--------|
| Deployer cannot pause | - | _ | - |

Overall checkup (Smart Contract Security)

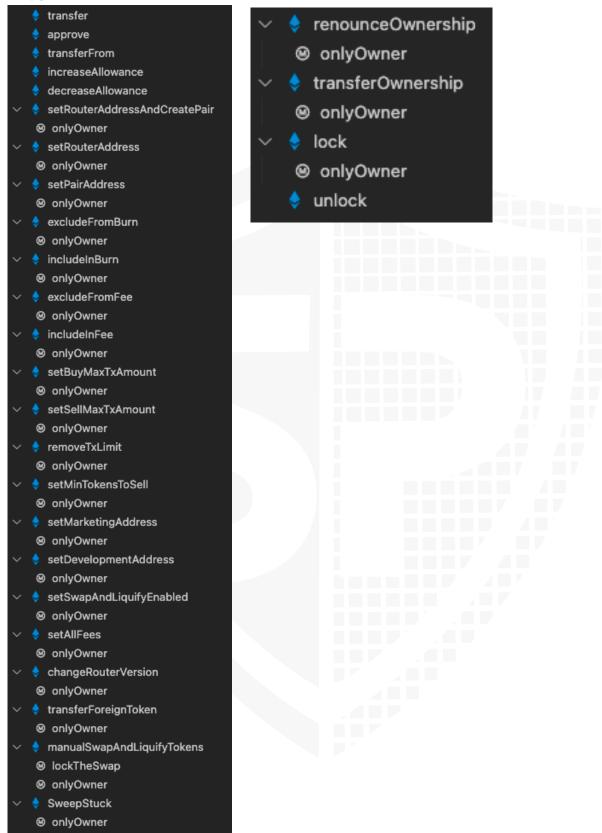

Legend

| Attribute | Symbol |
|--------------------------|--------------|
| Verfified / Checked | \checkmark |
| Partly Verified | P |
| Unverified / Not checked | X |
| Not available | - |

Modifiers and public functions

v1.0

Comments

· Deployer can set following state variables without any limitations

- minimumTokensBeforeSwap
- Deployer can enable/disable following state variables
 - swapAndLiquifyEnabled
 - _isExcludedFromFee
 - _isExcluded
 - excluded
- Deployer can set following addresses
 - uniswapV2Pair
 - uniswapV2Router
 - developmentAddress
 - marketingAddress
 - owner
- Existing Modifiers
 - onlyOwner
 - lockTheSwap
 - lock
 - ensure
- · Only owner can transfer contract balance to his own address
- Tx amounts can be set to 0

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

| Туре | File | Logic Contracts | Interfaces | Lines | nLines | nSLOC | Comment Lines | Complex. Score | Capabilities |
|----------------------------|---------------------------------|--------------------|------------|-------|--------|-------|------------------|-------------------|----------------|
| ∌ € Q | contracts/UniswapV2Router02.sol | 4 | 6 | 821 | 429 | 353 | 45 | 580 | . <u>Š</u> . |
| ⊘ € Q% | contracts/SpeedFi.sol | 5 | 5 | 1019 | 799 | 596 | 50 | 650 | |
| ≥ € | contracts/UniswapV2Factory.sol | 6 | 4 | 473 | 431 | 332 | 60 | 363 | ■ 羅 *6❖ |
| ⊘ \& Q \& | Totals | 15 | 15 | 2313 | 1659 | 1281 | 155 | 1593 | |

Legend

| Attribute | Description |
|--|---|
| Lines total lines of the source unit | |
| nLines normalized lines of the source unit (e.g. normalizes functions spanning multiple lines) | |
| nSLOC | normalized source lines of code (only source-code lines; no comments, no blank lines) |
| Comment Lines | lines containing single or block comments |
| Complexity Score | a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces,) |

Audit Results

AUDIT PASSED

Critical issues

No critical issues

High issues

No high issues

Medium issues

| Issue | File | Туре | Line | Description |
|-------|--------------|-----------------------|--------------------|---|
| #1 | File Main | Type Regain ownership | See description | Description Owner can regain ownership after transferring it with following steps: 1. Call lock function to set _previousOwner to the own address 2. Call unlock function to get ownership back 3. Transfer/renounce ownership 4. Call unlock function to get ownership back |
| | | | | Make sure to set the _previousOwnership back to address zero after using the unlock function |

Low issues

| Issue | File | Type | Line | Description |
|-------|------|------|------|-------------|
| | | 31 | | I |

| #1 | Main | Contract doesn't import npm packages from source (like OpenZeppelin etc.) | - | We recommend to import all packages from npm directly without flatten the contract. Functions could be modified or can be susceptible to vulnerabilities |
|----|---------|---|---|--|
| #2 | Main | A floating pragma is set | | The current pragma Solidity directive is ""^0."". |
| #3 | Main | Missing Zero Address Validation (missing- zero-check) | 931 926 599 | Check that the address is not zero |
| #4 | Main | State variable visibility is not set | 463 | It is best practice to set the visibility of state variables explicitly |
| #5 | SpeedFi | Local variables shadowing | 632, 545 | Rename the local variables that shadow another component Recommendation: owner to ownerAddress |
| #6 | Main | Missing Events Arithmetic | 944 945 946 952 953 954 908 922 913 | Emit an event for critical parameter changes |

Informational issues

| Issue | File | Type | Line | Description |
|-------|------|--|---|---|
| #1 | Main | State variables that could be declared constant (constable-states) | 436, 437, 438, 439, 431, 432, 411 | Add the `constant` attributes to state variables that never change |
| #2 | Main | Functions that are not used | 717, 958 | Remove unused functions. Before removing check the function, it could be possible, that you forget to implement it into the contract |

| #3 | Main | Variable has no functionality | 948-950 | State variable has no functionality in the contract. buyBurnFeebuyMarketingFeebuyDevelopmentFee Remove unnecessary state variables |
|----|------|-------------------------------|--------------------|---|
| #4 | Main | Misspelling | See description | Change following words: - tokensIntoLiqudity L471 L476 - hasnt L583 - swaped L994 Make sure to change it everywhere else as well. |
| #5 | Main | Unused event | 479, 468, 466 | Remove or emit event in the functions |

Commented Code exist

There are some instances of code being commented out in the following files that should be removed:

| File | Line | Comment |
|------|------|---|
| Main | 7 | // assert(a == b * c + a % b); // There is no case in which this doesn't hold |

Recommendation

Remove the commented code, or address them properly.

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information https://docs.soliditylang.org/en/v0.5.10/natspec-format.html) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

10. June 2022:

· Read whole report and modifiers section for more information

SWC Attacks

| ID | Title | Relationships | Status |
|--------------------------------------|--|--|---------------|
| <u>SW</u> <u>C-1</u> <u>36</u> | Unencrypted Private Data On-Chain | CWE-767: Access to Critical Private Variable via Public Method | PASSED |
| <u>SW</u> <u>C-1</u> <u>35</u> | Code With No Effects | CWE-1164: Irrelevant Code | PASSED |
| <u>SW</u> <u>C-1</u> <u>34</u> | Message call with hardcoded gas amount | CWE-655: Improper Initialization | PASSED |
| <u>SW</u> <u>C-1</u> <u>33</u> | Hash Collisions With Multiple Variable Length Arguments | CWE-294: Authentication Bypass by Capture-replay | PASSED |
| <u>SW</u> <u>C-1</u> <u>32</u> | Unexpected Ether balance | CWE-667: Improper Locking | PASSED |
| <u>SW</u> <u>C-1</u> <u>31</u> | Presence of unused variables | CWE-1164: Irrelevant Code | NOT PASSED |
| <u>SW</u> <u>C-1</u> <u>30</u> | Right-To-Left- Override control character (U+202E) | CWE-451: User Interface (UI) Misrepresentation of Critical Information | PASSED |
| <u>SW</u> <u>C-1</u> <u>29</u> | Typographical Error | CWE-480: Use of Incorrect Operator | PASSED |
| <u>SW</u> <u>C-1</u> <u>28</u> | DoS With Block Gas Limit | CWE-400: Uncontrolled Resource Consumption | PASSED |

| <u>SW</u> <u>C-1</u> <u>27</u> | Arbitrary Jump with Function Type Variable | CWE-695: Use of Low-Level Functionality | PASSED |
